Aryan Lade

SOFTWARE ENGINEER INTERN

Nagpur, India | +91-8262868803 | aryanlade55@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science student with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming, proficient in Java, Python, and C++, with working exposure to Go. Experienced in full-stack web development (ReactJS, Node.js, REST APIs, MongoDB/MySQL) and building production-grade systems through collaborative, multi-developer projects. Active open-source contributor through GSSoC 2026 with hands-on Git/GitHub workflow experience, including code review and pull request collaboration. Solved 500+ DSA problems on LeetCode and currently working as a Software Engineering Intern (AI-Focused) on AI-driven development.

TECHNICAL SKILLS

Technical Skills: Java, Python, C++, Go (familiar), JavaScript, TypeScript, ReactJS, Node.js, Express.js, Flask, AngularJS, HTML, CSS, Android Development, REST APIs, MySQL, MongoDB, Oracle Database, Sequelize, Firebase, Docker, Git/GitHub, AWS, Azure, Agile/Scrum
Core Competencies: Data Structures & Algorithms, OOP, Problem Solving, Software Engineering Principles, System Design Principles (Scalability, REST API Design), Microservices Architecture, Authentication (JWT, OAuth), Debugging & Unit Testing
AI/ML: Machine Learning, Predictive Modeling, Data Analysis, Pandas, NumPy, Matplotlib, AI-Assisted Development
Soft Skills: Communication, Team Collaboration, Adaptability

PROFESSIONAL EXPERIENCE

Software Engineering Intern (AI-Focused) **October 2026 – November 2026**
iLoma Technology Pvt. Ltd. *Remote*

– Worked on an assigned project with a focus on AI-driven development, including AI-assisted coding workflows, as part of a remote engineering internship.
– Reviewed, tested, and validated AI-generated code before submission, following company guidelines on AI tool usage and repository handling.
– Delivered daily progress reports covering work completed, blockers, and next-day plans while managing 2–3 hours of daily work alongside university coursework.

Open Source Contributor **May 2026 – Present**
GSSoC 2026 *Remote*

- Contributed to a large-scale open-source project under GirlScript Summer of Code (GSSoC 2026), collaborating with maintainers via Git and GitHub across distributed teams.
- Submitted pull requests implementing feature enhancements and bug fixes, resolving issues and passing code review to improve code quality and maintainability.
- Applied version control, debugging, unit testing, and merge conflict resolution in a collaborative, production-level codebase.

PROJECTS

SmartAllocate – AI-Powered Volunteer Matching Platform | React, Node.js, Python, MongoDB

– Built a full-stack platform matching NGO volunteers to tasks using a weighted ML scoring engine combining Jaccard similarity, schedule overlap, and Haversine distance, achieving 95% matching accuracy.
– Designed and implemented REST APIs across Node.js/Express and Python/Flask microservices to handle volunteer-task matching, scoring, and real-time analytics.
– Developed an NGO dashboard with real-time impact analytics, Google OAuth authentication via Firebase, and automated in-app notifications.

DocZen – Full-Stack Document Management Platform | Java, React, TypeScript, Node.js, Express, MySQL

– Collaborated with a 3-member team to build a full-stack platform offering 25+ document tools (merge, compress, convert, protect, OCR) via a modular REST API with per-tool controllers and routes.
– Implemented JWT-based authentication, rate limiting, and role-based file access, with bcrypt password hashing and per-user storage quotas backed by MySQL/Sequelize.
– Built a config-driven tool registry on the frontend so new Java backend tools automatically render in the UI, and containerized the server with Docker (multi-stage build with LibreOffice/Ghostscript) for deployment.

ACHIEVEMENTS

- Solved 500+ Data Structures and Algorithms problems on LeetCode, demonstrating strong algorithmic problem-solving skills.
- Participated in 10+ hackathons, building real-world software solutions under tight deadlines while strengthening teamwork and rapid prototyping skills.
- Demonstrated self-driven motivation and entrepreneurial passion through active participation in competitive programming and development projects.

CERTIFICATIONS

- Google Agile Essentials – Agile Methodology and Scrum
- Meta Full Stack Developer Specialization – Front-End and Back-End Development

EDUCATION

Bachelor of Technology in Computer Science **2024 – 2028**
Ramdeobaba University, Nagpur *CGPA: 8.48*
